DESCRIPTORS: *Embryos, Lenses, Tissues(Biology), *Antigens, Proteins, Biochemistry, *Crystalline lens.

A study of the process of antigen formation in the developing crystalline lens of the chick showed that establishment of its antigen structure is complete after seven days of incubation. During this period of development all the seven antigens characteristic of the definitive lens are formed. A very small amount of antigen of the definitive lens was found in the lens placode of the embryos in the 23-25 somite stage of develop-
